COMPONENT INSIDER

JUNE 2026 EDITION

Hello [First Name] !

Welcome to our monthly newsletter, your go-to source for everything related to OMRON Electronic Components! We'll be discussing our latest in technology, events, and more! Whether you're looking to stay ahead of the curve or simply curious about what's new, we've got you covered. Let's dive in and discover the exciting world of electronic components together!

If you have any feedback, please email us!

Sincerely,
The Team @ OMRON Electronic Components

B3SE

Omron's B3SE is an ultra-thin, sealed surface-mount tactile switch designed for compact electronics that need reliable performance in harsh or dusty environments. Its 6 mm-square, 2 mm-tall design supports thinner, smaller devices, while its IP67-conforming sealed structure provides dust and water protection. The switch also delivers a crisp click feel, high-density surface mounting, and durability rated for up to 1 million operations.

B5WC with Visualization

Traditional color sensors output separate RGB values, making threshold setup complex. The B5WC expansion (-VB2323-1) solves this by converting RGB data into a single Color Index (C), so users only need to set one threshold to detect color changes. Results are read easily via I²C, reducing system complexity. It's especially effective for detecting changes in color saturation, making it ideal for straightforward, reliable color detection in industrial applications.
